

Technology to Reopen the World

CME Webinar • October 29, 2020 • 1-2 PM

COVID-19 has brought global economic progress and the level of human activity to its knees more quickly and vastly than past pandemics. The effectiveness of the health care system, pharmaceuticals and biomedical advances hold the key to reopening the world.

To resume our life journeys, the world's best minds are developing breakthroughs in mRNA, monoclonal antibodies, molecular engineering, chemical synthesis, drug delivery and rapid green manufacturing as well as innovative materials, medical devices and communication technologies.

Tens of trillions of dollars depend on the pandemic response of the health system combined with the scaleup of therapeutics, vaccines and advanced biomaterials. To hear how to adapt your business strategies, join us to learn insights in the life sciences, government policy and economics.

Shahira Knight is the deputy managing principal in Deloitte Services Policy & Government Relations group. Previously, she served as the president's top liaison between the White House and Congress and as deputy assistant to the president for Economic Policy and deputy director of the National Economic Council.

Joachim Kohn, PhD, FBSE, is Rutgers University Board of Governors Professor of Chemistry; Head, Laboratory for Biomaterials Research; President-Elect, International Union of Societies for Biomaterials Science and Engineering; and Fellow of the National Academy of Inventors.

Kevin Swift, PhD, is the Chief Economist at the American Chemistry Council, where he analyzes markets, raw materials, trade, tax, energy, innovation, as well as identifying emerging trends for the domestic and global chemical sector. He is the past president of the National Association for Business Economics (NABE).

Duane Dickson (moderator) is a Vice Chairman and principal in Deloitte Consulting LLP's Energy Resources & Industrials group. He served as a World Economic Forum's Project Advisor and the Forum's Chemical Community Lead, Chemistry and Advanced Materials. He is often quoted at industry media outlets.
